

IKS Assignment

The Context

As part of our interview process, we want to see how you tackle real-world product challenges. We aren't looking for a fully functional, production-ready application. Instead, we want to see a high-level facade or prototype that demonstrates your architectural thinking, product mindset, and UI approach.

The Goal

Design and build a facade for an Agentic Workflow Management System that processes medical appointments.

Core Product Requirements

Intelligent Orchestrator:

A master agent that ingests a feed of appointments from a database. It must intelligently decide which appointments to process first based on dynamic priorities (which may vary by client, specialty, or other unknown factors).

Agentic Processing:

Appointments go through a configurable number of processing stages (e.g., 6 stages). Each stage should be conceptualized as an individual agent.

Standardized Outputs:

Each processing stage must return one of four states: Not Started, Processing, Complete, or Escalate.

The Exception Queue:

If an agent returns Escalate, the appointment must be routed to a human-in-the-loop Exception Queue.

Human Concierge Resolution:

A human user must be able to interact with the Exception Queue to unblock the issue. Once resolved, the system should immediately update the appointment status to Cleared and resume workflow if necessary.

IKS Assignment

Deliverables

Please provide a high-level working facade (UI + mocked backend/logic) and a brief summary of your architectural decisions (a short ReadMe or diagram is perfect).

How We Will Evaluate Your Submission

We will be reviewing your assignment during our follow-up conversation, specifically focusing on:

Agent Architecture

UI/UX Design

Product Mindset:

A Note on Your Time and approach

We value your time and expertise. Please time-box this exercise to a few hours—we are looking for a conceptual facade, not complete perfection. ***However, if your submission is selected and you move forward in our process, any recognition for the effort invested in this assignment will be aligned as part of the overall offer structure upon joining, in addition to discussing a full-time offer.***

Additionally if you use GenAI to write this, please be prepared to share the prompts and release plans used.
